Rosenberger in the world

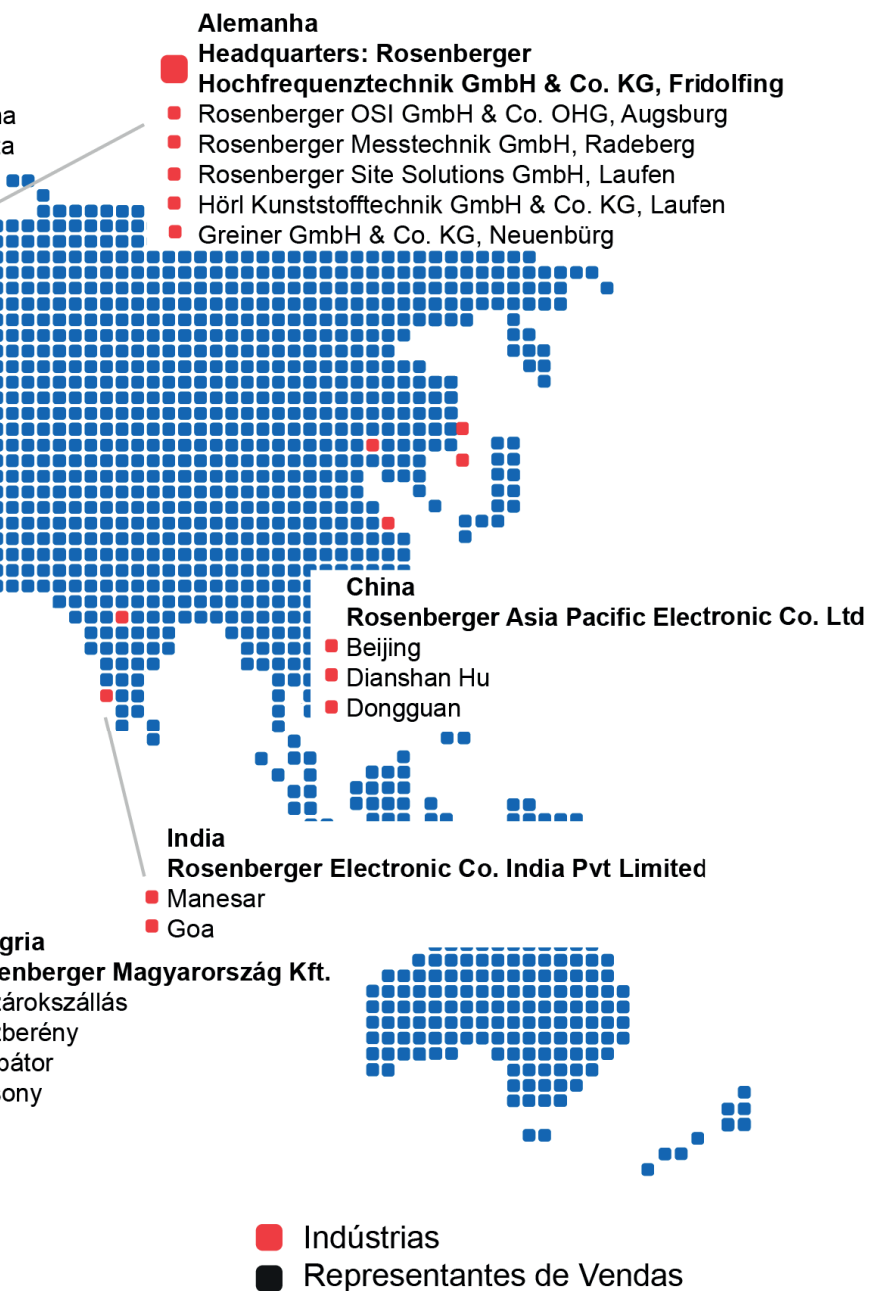

Brazil Certificates: ISO 9001:2015

ISO 14001:2015

Welcome to the group

The Rosenberger group specializes in the development, manufacturing and sales of technological solutions for the telecommunications, automotive, test and measurement and precision equipment markets.

The Group's organizational structure is formed by more than 11.300 employees, spread among several operating units in Europe, Asia and the Americas.

For more than half a century, the name Rosenberger has been linked with the most advanced technology, highest levels of quality, and deep creative content.

The Group presents itself as one of the world leaders in the segment of high frequency and optical fiber connection solutions.

The Group operates with a high degree of partnership with customers and serves the most renowned companies in technology, telecommunications, data systems, medical electronics, industrial measurement technology, automotive electronics, and electromobility.

Annually, strategic investments are made in the development of new products with the highest quality and in the most advanced manufacturing and business processes, always taking into account the conservation of resources and environmental protection.

Above all, the Group continues to invest in it's best asset - the people - knowing that the people are the future of the company.

Rosenberger Hochfrequenztechnik

Rosenberger Headquarters - Fridolfing/Germany

Located in Fridolfing, Upper Bavaria, at the foot of the Alps in the far south-east of Germany, close to the Austrian city of Salzburg. Founded by Sr. Hans Rosenberger in 1958 in Tittmoning, the family business developed into a medium-sized industry. In 1968, he moved to the Traunstein region, expanding his manufacturing area and entering the high-frequency technology sector. Currently more than 1450 people work at the headquarters of the Rosenberger Group.

Rosenberger Brasil - Caçapava/São Paulo

In Brazil since 1985, it is established in its own headquarters in the municipality of Caçapava, state of São Paulo, close to the Carvalho Pinto Highway, between Rio de Janeiro and São Paulo, Brazil's main industrial axis. The new 26,000 m² plant was built within the most modern concepts of Sustainability and Human Factor Management. Its location is privileged in terms of logistics and national aspects, due to its closeness to technological research centers, cutting-edge industries, and large urbanization centers.

This unit produces:

Optical Fibers (FO)

- Patchcords
- Pigtaills
- Trunk, Harness, and FTTH cables
- Racks and DIOs

Radio Frequency (RF)

- Flexible Cables
- Corrugated Jumpers
- FAKRA®

Timeline

1958

Foundation of the company by Hans Rosenberger Senior. The original steel works workshop was the beginning of the current machining manufacturing center for customized machinery.

1967

Beginning of activities in the area of high frequency technology.

1968

Purchase and transfer of operations to the new industrial plant in Fridolfing/Pietling.

1970

The high-frequency technology segment becomes the company's main business with the start of large-scale manufacturing of miniature connectors with a large investment in machinery, manufacturing and measurement equipment.

1983

His sons, Hans, Bernhard and Peter Rosenberger join the company. Hans Rosenberger Jr. takes over the financial and sales management of the high-frequency sector. Bernhard Rosenberger expands the RF and R&D laboratory.

1985

Opening of the first sales office in Denmark followed by expansion in Europe with the opening of new offices, partnerships, and subsidiaries. Beginning of the optical fiber segment within the company.

1990

Becomes one of the world leaders in the manufacture of radio frequency coaxial connectors and begins to expand outside the European continent: USA, China, Chile, Singapore, and Brazil.

1997

Acquisition of OSI Kommunikationsund Systemtechnik, Augsburg (currently Rosenberger-OSI GmbH & Co. OHG) and surface mount technology development: Impedance control printed circuit.

1999

The inauguration of Rosenberger Sudamerica Ltda takes place in Santiago de Chile, responsible for the expansion and development of the business in Latin America – with sales partners in several countries.

Entry into the automotive electronics market: Development of FAKRA-RF connectors for the automotive industry.

2000

Inauguration of a new factory with electroplating workshop and cable assembly workshop in Beijing, China. Capacity to manufacture parts for high-frequency technology doubles at Headquarters in Fridolfing/Germany.

2001

Rosenberger Hungary becomes an assembly center for the European market. The subsequent inauguration of a new factory, in 2007, in Jászárokszallás, incorporates the manufacture of connectors and cables.

2003

New stamping and molding technology for complex automotive connectors. Beijing Rosenberger becomes Rosenberger Asia Pacific.

2004

The first subsidiary in India appears in Gurgaon/Haryana, with a sales office located in Bangalore.

2006

The new Rosenberger Domex Telecom plant opens in Brazil and the production capacity expands in the USA, India, and Hungary.

2010

Hörl, a company of the Rosenberger Group, establishes a new plant in Laufen/Germany. Start of a new assembly line for the high voltage segment in Jászberény/Hungary.

2014

Inauguration of a new state-of-the-art unit in Goa/India and a new sales office in Tokyo/Japan named Rosenberger Automotive Japan LLC.

2015

Rosenberger Fridolfing's 60th anniversary 2019.

2018

Group's operating markets

Communication – FO and RF

With extensive experience in the radio frequency industry, Rosenberger has in its portfolio several types of RF connectors, cable assembly, miniaturization for cable-to-board connectors, board-to-board, and connections for printed circuit boards, the Group also offers innovative products in the optical frequency range, from customized optical cords to hybrid solutions. The optical fiber connection systems feature connectors, adapters and attenuators, trunk type cables - PreCONNECT® line, Racks and Optical Intermediate Distributors. It also offers measuring devices as a special service for determining the performance of passive intermodulation of connection systems in laboratories, production lines and in the field.

Automotive

The growth in this market is a result of the increased application of data transmission technology in motor vehicles. Rosenberger supplied its first functional FAKRA connectors for standard, high-frequency on-board applications in vehicles. Dynamic development continues with technical innovations, such as the introduction of stamping technology and the Rosenberger HSD® controlled impedance system. These products have guaranteed the Rosenberger group a leading position in the market. We are currently concentrating our know-how on the development and manufacture of connection solutions for hybrid technology and electric mobility applications, such as RoPD® and HVR® contacts for data and energy transmission.

Medical & Industrial

This business unit takes into account the special demands of medical technology and industrial automation. In the field of medical technology, diagnostic imaging systems such as MRI (magnetic resonance imaging), PET-CET (positron emission tomography), CT (computed tomography), ultrasound and endoscopy are all essential future technologies. The Group offers innovative connector solutions for these applications. Generally, industrial automation deals with specific solutions, which are developed in cooperation with the customer. The diverse range of Rosenberger products includes high frequency, high voltage, high current, differential, optical fiber, and non-magnetic interface solutions.

Measurement

In the innovative “Test and Measurement” business unit, the Rosenberger group is a reliable and accurate development partner in industrial measurement technology. Global cooperation with leading companies in the field of electronic measurement technology demonstrates confidence in our research and development, in our high quality manufacturing: “Made in Germany”. For customized solutions, the Rosenberger group offers the ability to provide solutions at a better cost. The range of precision connectors includes cable connectors and adapters from the RPC-N, RPC-TNC, RPC-7, RPC-SP, RPC-3.50, RPC-2.92, RPC-2.40, RPC-1.85 and RPC-1.00 series.

Custom Equipment

When Sr. Hans Rosenberger became an independent metalworker in 1958, with a small workshop, this was the seed of the current machining center and, at the same time, the cornerstone of the company we know. Today, the Rosenberger “Custom Machining Center” has become a specialist in custom parts and ready to install. Our main competence is in the area of turning, drilling, cutting, and gearing. With the implementation of the highest technical standards, our customized machining center has become a qualified partner for the drive and commercial vehicle industry, as well as for machine and system manufacturers.

Taurus Line.....	72	FTTx	114
Cabling.....	78		

Datacenter

Our line of Data Center Solutions include copper & fiber cabling solutions (patch cords, trunk cables and custom fanouts), optical distribution solutions (Focux family of solutions and raceway), and a 19" rack mount flexible solution (Taurus).

In this catalog you will find:

Focux Solution: Racks, subracks, and modules - High Density - starting on page 10

Cabling: Patch Panel, Cables - starting on page 80

Cables and cords: Trunks, patchcords, and harness - starting on page 84

Raceway Conduits - starting on page 96

Rosenberger

FTTx

Operating in the Brazilian telecom market for 35 years, we offer a complete solution including a wide range of passive products for FTTH, such as optical intermediate distributors, patchcords, field connector, CTO, splice boxes, drop cable, splitters, faceplates, and mechanical splice. **Discover the entire FTTX line starting on page 115.**

Patchcords, connectors - starting on page 90

FOCUX

SOLUTION

RACKS | SUBRACKS | MODULES

The FOCUX optical distribution solutions, composed of a family of products - including the cabinets, subracks, modules and cabling, is designed with a high density of fiber connections in a small footprint, allowing for ease of IMACs, fiber security and overall link protection.

The racks were designed for allowing installations to be side by side, coast to coast and against the wall. The front doors have front access to limit internal access to authorized persons. FOCUX can be installed on either raised floors or concrete slabs for several options for security. All models are 300 mm deep, creating cost savings per floor space occupation. Height can be 2200 mm or 1800 mm for rooms with low ceilings. They have different widths, 300 mm, 600 mm, 900 mm and 1200 mm, allowing the installation of up to 2880 fibers in a single rack.

The solution is designed to be modular using either 2RU or 4RU subracks, allowing for the unit to be built out as needed. This approach also reduces the initial investment as you add components as needed versus all at once. In addition, the solution family uses the same modules, thereby providing for greater availability while reducing onsite inventory management.

An important feature of the FOCUX solution is the slack fiber managers. The slack managers keep the cabling neat and organized preventing the cable plant from becoming unmanageable. In addition, the slack managers facilitate both intra-rack and inter-rack connections bringing more flexibility and modularity to your data center.

The Focux line allows easy and fast IMAC (Installation, Move, Add, and Change). The internal space is sufficient to safely activate and deactivate connections. Videos, manuals, and training are available online for training.

APPLICATIONS: FTTX | DATACENTERS | TELECOMMUNICATIONS

INSTALLATION:

FOCUX **+** PLUS

SOLUTION

High capacity up to 2880 FO

Capacity up to 10 SR-900
or 10 SR-288
or 20 QDF-900

Uses less floor space

Low cost per occupied area

100% front access - install anywhere

Vertical cable management

Support proper bend radius of fibers

Enough space to fit and operate
fibers safely

Enables IMACs (Installation, Move,
Add, Change)

Corrosion resistant

Security door with locking options

Installation

Technical Specification

Useful height (Us)	40
WxHxD (mm)	900x2200x300
Weight (Kg)	102

Available in colors:

- Light Gray RAL 7035
 - Black RAL 9005
- Other colors on request*

Details

Top cable entry/exit

Lower cable entry/exit

Vertical cable management

Sill for the passage of
back-to-back cords

Cremone clasp

FTH-9 Plus Wave

Patent required

- High capacity up to 2880 FO
- Capacity up to 10 SR-900 or 10 SR-288 or 20 QDF-900
- Uses less floor space
- Low cost per occupied area
- 100% front access - install anywhere
- Vertical cable management
- Support proper bend radius of fibers
- Enough space to fit and operate fibers safely
- Enables IMACs (Installation, Move, Add, Change)
- Corrosion resistant
- Security door with locking options
- Resistant to earthquakes

Installation

According to IEEE 693-2005, recommended for regions in zone 4 of the fire belt.

Demonstration assembly of cables and cords

Technical Specification

VERTUX

SOLUTION

RACKS | SUBRACKS | MODULES

The Vertux product family is designed with flexibility in mind. It allows for modular assembly of the rack, adapting to the customer's needs and ensuring the possibility of future expansion of the entire infrastructure. The products have reduced dimensions, with the capacity to support a higher density of fiber connections, fully compatible with the various versions and models of the solution.

The entire installation takes into account the saving of physical space with the integration of patch modules, splitters, and WDM in a single set, in a safe way, with easy handling and routing identification. This layout guarantees a clean and unobstructed installation, one of the most important aspects to be considered when implementing a fiber management solution in a data center with the focus on making IMACs easier.

APPLICATIONS: FTTX | DATACENTERS | TELECOMMUNICATIONS

INSTALLATION:

VTH-1200

Capacity up to 1008 fibers

Capacity up to 7 SV-DGO

Cable management supporting proper fiber bend radius for proper cord handling with full control of the radius curvature of the fibers

Management of cable ties to plates with positioning adjustment

Allows modularity

100% front access - mounts anywhere

Rounded cable mandrels for better cable support

Enough space to fit and operate fibers safely

Enables IMACs (Installation, Move, Add, Change)

Corrosion resistant

Cabinet door with multiple security solutions

Secure side cabinet doors

Steel door or acrylic cover

Installation

Technical Specification

Useful height (Us)	45
WxHxD (mm)	1200x2200x300
Weight (Kg)	120

Available in colors:

■ Light Gray RAL 7035

■ Black RAL 9005

Details

Fingers

Tubes

Cable board

Base and pin of the door

Magnet to fix doors

VTH-600 - Central

Capacity up to 1008 fibers

Capacity up to 7 SV-DGO

Allows modularity

100% front access - install anywhere

Side openings for passing strands

Support proper bend radius of fibers

Enough space to fit and operate fibers safely

Column silkscreen with marking of U units on 19" fixation

Enables IMACs (Installation, Move, Add, Change)

Corrosion resistant

Security door with locking options

Steel door or acrylic cover

Custom front cover (optional)

Installation

Optical Intermediate Distributors

Optical Intermediate Distributors, commonly known by the acronym DIO, are physical interfaces developed to support optical routes. They are used to migrate fibers from one point to another through different types of connections. They can fit cassettes to support spliced fibers or to support patch or transition cable assemblies.

DIO INTERCON II - the best-seller!

DIO INTERCON II - High Power 4.5 W

AVAILABLE VERSIONS:

	<p>HIGH POWER 4.5W SOLUTION</p>

DGO P-12

Splicing or Patching

Capacity up to 12 FO

It has an inlet and an outlet at the top and bottom with sealing rubber for cables and optical cords

Internal panel with numeric identification

Internal compartment for accommodating Pigtaills, Loose Tube and Optical Splicin

Closing of the hinged lid by means of a castle lock with keys

Installation kit

Corrosion resistant

DGO P-12 attached to wall, entrance of optical cable and cord outlet

Installation

Indoor wall

Taurus Line

DATACENTER

The Data Center is the data processing center that transmits, stores and protects the information of your business and your customers.

The security and speed of these processes are the most important factors for the success of a Data Center.

Fiber optical is the safest and fastest means of data transport today.

The growth of new applications that will reach users worldwide and have their data processed in a Data Center is exponential. This will require greater processing capacity for the Data Centers, and consequently greater infrastructure, impacting higher investment expenses.

DIOS | MODULES

Oriented to the needs of its customers, Rosenberger developed the line of Taurus DIOs for high fiber density environments such as MDA, HDA or EDA / IDA in data centers as a way to reduce the impact of these expenses due to less occupation of physical space increasing the longevity of the existing infrastructure and prepared for 40/100 / 200GBASE-SR4, 40/100GBASE-PSM4 and 200 / 400GBASE-DR4 supporting the growing increase in data processing.

DIOS can be 1U, 2U or 4U with quick and easy installation, making the system start up and start generating revenue in less time than common solutions using modular plug and play panels that reduce downtime during movements, changes and growth (IMAC), as well as allowing the evolution to 100/200 / 400G on the same chassis base, reducing investment time and cost.

To evolve to 100/200 / 400G, the system has panels with MTP pass-through ports, as well as MTP-LC Base8 modules that optimize the use of trunk cables, taking advantage of 100% of the fibers, reducing the amount of cables in the infrastructure and the space occupied in the pipeline generating savings and growth potential for your Data Center.

APPLICATION: DATA CENTERS | TELECOMMUNICATION | FTTX

Taurus III - 1U

Patching

Capacity up to 48-port (96FO)

Front cover with patchcord organizer

Removable top cover

4 slots for modules / panels

Installation kit

Cabling

DATACENTER

Rosenberger has an advanced solution for the cabling industry including copper products and broadband technology of high quality and excellent practicality.

Cables and UTP Cat-6 patchcords with Anatel certification and Patch Panels with 24 or 48 ports with its own distribution, which guarantees greater competitiveness.

The solution meets all kinds of specific requirements with bespoke design, patented technology, as well as the highest quality service for all structured cabling systems in buildings and datacenter applications.

Patch Panel

Cat6 - 24 ports

Dust proof panel

Up to 24 ports

*High impact flame retardant plastic,
UL94V-0 rated*

*Bronze phosphorus C5210EH contact, gold
plating 50µm over
nickel plating 50~100µm*

Minimum 750 connection cycles

Compatible with solid 22-26AWG cables

Installation

Racks 19"

Technical Specification

Useful height (Us)	1
WxHxD (mm)	483x44x151
Approximate weight (Kg)	0,64

Details

Cat6 - 4 pairs

*Support applications at 100 Mbps,
1000 Mbps and 10 Gbps*

Made of PVC - flame retardant

RoHS Compliant

*Exceeds the performance requirements of TIA/EIA-
568-C.2 and ISO / IEC11801 2nd*

*More stable, high-quality electrical and mechanical
construction ensure demanding applications*

*Compatible with all current connection hardware to
EN 50173, TIA/EIA 568 and ISO / IEC 11801*

Available in color:

■ Gray

Cables and Cords

TRUNKS | PATCHCORDS | HARNESS

The PreConnect® solution consists of multipath cables from 2 to 144 fibers pre-connected at the factory. Manufacturing can be done with varying lengths and different types of optical connectors, mounted on just one end of the cable or both, as requested by the customer. Singlemode or multimode fibers can be used. All cable routes are factory tested in accordance with applicable IEC, EIA, and NBR standards. The cable is protected, embedded, and packaged to guarantee its integrity during transport, storage, and future installation.

The use of PreConnect® cables allows easy and fast IMAC (Installation, Move, Add, and Change) reducing investment costs and project delivery times, offering additional security and protection to the fibers.

Cables can be of the Trunk type, with anti-rodent protection, if used to connect an internal plant with an external plant or micro-cables to connect different environments of the internal plant. They can also be used in industry or for applications of external broadcast activity, where they need to be installed and uninstalled quickly and easily.

They can be of the Harness type, also known as fanout or breakout, this configuration consists of 12 or 24-way cables with less robustness for short internal connections, widely used in parallel communication with high data transmission rate.

The use of trunk cables is highly recommended for those looking to reduce costs, increase availability, infrastructure longevity, speed and easier of installation. As it allows up to 144 lanes in small diameters, trunk cables take up less space on conveyors, reducing the infrastructure cost and improving the flow of air conditioning due to less obstruction of floor space.

Raceway Conduits

Fiber Raceway are designed with the purpose of providing secure accommodation for the optical infrastructure. They are produced in PC&ABS (a plastic alloy composed of polycarbonate and acrylonitrile butadiene styrene) and LSZH (low smoke, halogen free) material with flame retardant and electromagnetic insulating characteristics. It is designed with both fiber bend radius and overall fiber security in mind.

It allows quick and enables IMACs (Installation, Move, Add, Change) with little need for cutting and adaptation. Due to the structure of the PC&ABS alloy, the parts that need cutting for installation do not create residues or dust, avoiding dirt and damage to the active equipment inside the facility.

The following products are available to support your needs:

- Lines and covers
- Intersections and covers
- “T” type and covers
- Horizontal curve and covers 45° and 90°
- Vertical rise and fall curve 45° and 90°
- Reducers and covers
- Trumpets
- Termination covers
- Outlets and covers
- Joints and Support Kit
- T-Bolt screw and cover clips

Raceway Conduits

Vertical, Horizontal, and Cover Outlets

Vertical Outlet

Horizontal Output

Horizontal and vertical drop covers

Technical Specification

Description	Part Number	Dimensions (W x H x Thickness x Length) mm
Horizontal outlet 100x100	1T3444A00	288 X 153 X 3.0T X 200
Horizontal outlet cover 100x100	1T3534A00	248 X 84.5 X 3.0T X 203
Vertical outlet 100x100	1T3474A00	220 X 90 X 3.0T X 196
Vertical outlet cover 100x100	1T3544A00	180 X 97.5 X 3.0T X 215
Vertical outlet 220x100	1T3478A00	338 X 102 X 3.0T X 196
Vertical outlet cover 220x100	1T3544A01	286 X 97.5 X 3.0T X 196
	Material	PC&ABS - Halogen free

Junctions

Technical Specification

Description	Part Number	Dimensions (W x H x Thickness x Length) mm
Junction for conduit 50x50	1T3132A00	58 X 56 X 2.0T X 34(+4)
Junction for conduit 100x100	1T3134A00	112 X 109 X 3.0T X 45(+4)
Junction for conduit 160x100	1T3136A00	196 X 119.5 X 3.0T X 55(+4)
Junction for conduit 220x100	1T3138A01	256 X 119.5 X 3.0T X 55(+4)
Junction for conduit 300x100	1T31312A00	336 X 119.5 X 3.0T X 55(+4)
	Material	PC&ABS - Halogen free

Support Kits

We have models that can meet the specifications of each project.

Support Kit

1-hole support - Drilling for 1/4" to 5/8" (For 100/160 mm, 220 mm, and 300 mm rails)

2-hole support - Drills for 1/4" to 5/8" (for 100/160 mm, 220 mm, and 300 mm rails)

2-hole support - For 1/4", 3/8" and 5/8" (For mats of up to 600 mm wide)

Material: Metal

Chuck kit with cover and screw

Nut 5/8" Ø21 X 55 mm

Anchor Set: 5/8" Ø21 X 122 mm

Material: Metal

Support Kits

We provide third party parts compatibility adapters.

1. Nut | 2. T-Bolt

27,5 X 21 X 3.0T mm
20 X 8.5 X 2.5T (M6 X 24)
Material: PC&ABS Rubber SCM440
Halogen Free

Cover clip
38 X 40 X 2 ~ 3.5 X 17.5 mm
Material: Halogen-free PC&ABS

Horizontal Output Support
124 X 72 X 3.0T X 295 mm
Material: Steel

Threaded Bar, Nut, and Washer
1/4" to 5/8" x 2000/3000 mm - Threaded Bar
1/4" to 5/8" x 1 mm - Nut and Washer
Material: Steel
Galvanized or bichromatic finish
We have models that can meet the specifications of each project.

Extension and Anchor Bolt
1/4" to 5/8" Ø21 X 55 mm - Extension
1/4" to 5/8" Ø21 X 122 mm
Material: Steel
Galvanized or bichromatic finish

We have models that can meet the specifications of each project.

Mounting Structure
1/4" to 5/8"
112.5 X 63 X 6.0T X 50 mm
Material: Steel
Galvanized or bichromatic finish

Fiber Optic Installation Services

In addition to the entire product line, Rosenberger also provides specialized services of in-field installation of optical fibers.

Within our line of services we offer:

- Installation of structured cabling, optical cables, cords, DIOs, and racks;
- Installation of infrastructure: Raceway conduits, mats, wire bed;
- Fusion services, network certification, technical analysis;
- Surveys and technical analysis for preliminary and executive projects;
- Training and qualification of suppliers;
- Management and execution of passive optical network projects.

Cable installation - Trunk

Infrastructure installation, treadmill - Raceway conduits

Fiber optic fusion service

Training of suppliers in products

In-field supplier training

Project management and execution in passive optical networks

Accessories

Cleaning Cassette

For SC/E2000, LC, or MTP/MPO female
or MTP/MPO male connectors

Has a refill

Bolt Cleaner

For SC/E2000, LC or
MTP/MPO

Diameter 1.25 mm or 2.5 mm

MTP/MPO bolts

We have models with and without refill

Warning Signs

Material: Yellow PVC with black screen printing

Nylon cable ties included

Mod. A: 90x40 mm - Esp. 1 mm

Mod. B: 50x25 mm - Esp. 1 mm

Splicing Cassette

FTTx

The advancement of data transmission technology has provided the ideal environment for the emergence of household appliances with greater data processing needs. These devices are capable of operating voice, video and data - providing interactive services directly to the end user.

This new type of technology drove the increase in data traffic, forcing the evolution of telecommunications networks, including transformation of existing infrastructure, from the transmission room (where the signal is generated) to the end user.

This megatrend culminated in the appearance of passive optical networks, commonly referred to as, FTTx (*Fiber To The x*). This access technology, based on optical fiber is characterized by using only passive components in the transport of data (equipment that does not require electricity supply). FTTx provides broadband connectivity at high transmission rates to all types of end users including offices, condominiums, business and residential neighborhoods.

The letter “x” indicates how close the optical fiber is to the end user and can be replaced according to the network topology: FTTB (*Fiber To The Building*), FTTH (*Fiber To The Home*), FTTC (*Fiber To The Curb*), FTTN (*Fiber To The Node*), FTTO (*Fiber To The Office*).

Field Connector

High reliability and stability

Insertion loss with value maximum 0.5 dB and typical 0.3 dB

Return loss with value minimum 55dB

Reassembly capacity up to 10x

Compatible with flat cables (1.6 x 2.0 mm and 2.0 x 3.0 mm)

Available in APC and UPC polishes

Template with ruler for verification optical fiber strip

Inspection window for assembly verification connector (optical fiber curvature)

Simple and quick assembly in up to 1 minute

QR code on the packaging that directs you to the connector's assembly instructions

Easy open and reassembly

Model - X10

Personalized accessories in orange

Insertion guide

Cutting Jig

Fiber inspection window

Assembly tutorial video and instruction manual available in Portuguese and Spanish

Homologated for Brazilian market

Optical Cleaver

Compact size

Easy handling

Low cost

*No maintenance required
or blade adjustment*

*Quick cleavage for assembly
in the field connector*

*Slide lock design that protects
the cleaver from damage*

Plastic cutting jig stand

Technical Specification

Weight (g)	45
WxHxD (mm)	36x59x53
Number of cleaver	1000

Carrying cord included

Closed

Blade button

CTO Parvus

High robustness

Small dimensions

Quick and easy installation without the need for special tools

Rocker panel with capacity for up to 16 SC simplex adapters

Up-and-over door with lock

Designed for environments Indoor and Outdoor (installation on walls, posts, and strings)

Protection level IP65

Support for different optical splitter configurations - 1un 1x16 or 2un 1x8

Available in colors:

- Black
- Orange
- Green
- Yellow

Technical Specification

WxHxD (mm)	250x 300x110
Cable entry	3 inputs (Ø3 ~16 mm)
Cable outlet	16 drop cable outlets
Material	ABS plastic

**Homologated for
Brazilian market**

Rosenberger

Standard Faceplate

Indoor application (suitable for wall mounting)

Small dimensions

Top or bottom cable entry

Internal space for spare technical reserve

Made with reinforced plastic

Supports up to two SC simplex adapters

Compatible with two connection methods:

- 1. Direct connection of the connectorized drop cable with field connector*
- 2. Connection of the drop cable with pigtail by means of optical fusion*

Optional: The item can be supplied with pigtail and adapters

Technical Specification

WxHxD (mm)	86x86x24
Material	Reinforced plastic
Color	White

Internal Faceplate

Indoor application (suitable for wall mounting)

Small dimensions

Top or bottom cable entry

Internal space for spare technical reserve

Made with reinforced plastic

Supports a SC simplex adapter

Internally located adapter protecting the optical connection

Compatible with two connection methods:

- 1. Direct connection of the connectorized drop cable with field connector*
- 2. Connection of the drop cable with pigtail by means of optical fusion*

Optional: The item can be supplied with a pigtail and an adapter

Technical Specification

WxHxD mm	89.8x148.3x16
Material	Reinforced plastic
Color	White

Mechanical Splice

High reliability and stability

Low insertion loss with maximum value of 0.2 dB

Reassembly capacity up to 10x

Compatible with flat cables (2.0 x 3.0 mm)

Small dimensions

Template for assistance from optical fiber stripping

Simple and quick assembly within 2 minutes

Designed for single-mode fibers

Technical Specification

WxHxD (mm)	7x8x90
Insertion loss	≤ 20 dB
Return loss	≥ 40 dB
